— ~~Asthma~~ —

— ~~Pneumonia~~ —

— ~~Scorbutic~~ —

— ~~Convulsive~~ —

— ~~Thyroiditis~~ —

— ~~Lyster & Hypochond.~~ —

— ~~Catarrhous~~ —

This image shows a single, vertically oriented page from an old document. The paper has a warm, cream-colored tone with visible fibers and a slightly mottled texture. There are several large, irregular brown stains, likely from water damage or foxing, particularly on the left side and near the bottom. Faint, illegible horizontal lines are visible across the page, suggesting ghosting of text from the reverse side. A few dark, irregular spots are scattered across the surface, notably one near the bottom center and another towards the bottom left.

of the Otolgic state of fever.

I call it a state of fever, for it always attends it in a greater or less degree. It is a common disease in children. Now when it accompanies influenza, & all the forms of sore throat. It is sometimes excited by a salivation.

Remedies

1 V.S. - 2 prunes - 3 Blisters behind the ears. 4 Loud arrows. 5 The smoke of sugar burnt on coals & conveyed into the ear by ~~a pipe of tobacco~~ a funnel. The juice of the sweet sap of the hickory is used by the Indians for this purpose. If it tends to a suppuration, cataplasmas of bread & milk & boiled onions are proper to the external ear. Us

Dr Hamilton of Lynn Regis describes  
an affectionate sore mouth in men the  
sea shore which he calls Cancer Aggravations.  
It is a form of fever & the fever which is  
derived from marsh exhalation. Children  
& women are most subject to it. In the  
former it often destroys the fore teeth: the  
ulcers in the mouth are fetid, & discharge  
a corrosive matter.

2

will generally prevent this termination,  
as also the destruction of the membrana  
Tympani, and deafness. —

### The Asthous state of fever.

a sore throat and mouth is never a  
primary disease when accompanied with  
fever. It is the effect of an effort of  
nature to relieve herself by depletion.  
It sometimes attends Epidemicness. Dr  
Grainger describes a fever of this kind in  
Holland. In Chidam <sup>often</sup> it is the effect of  
general fever induced by the stimulus of  
the retained mucus, or perhaps by the  
common atmosphere. Now other it occurs  
as consumpt: Dyspnoea & Diarrhoea,  
in the close of chronic diseases, in which  
case it is generally fatal. In Anteceden-  
tia it is favourable. I have seen one, & read of

v The Catarrh of 1803 ended in a sore mouth  
or low degree of asthma in many people.

3

Another in which it proved fatal to a child.  
I have once known it terminate in *Cynanche Thlaspioides*

Remedies

~~1~~ They shd be regulated by the pulse,  
Season & signs of Epidemic. 1. Vs. if the  
pulse be tense or full. 2 purges. 3 Calm-  
ed if nature be incompetent to cleanse  
the mouth & throat. 4 Blisters. 5 Gargles  
of detergent liquor - as Sage tea with  
honey & vinegar - alum - myrrh etc. 6  
~~6~~ Roots. — Dr Hamilton commands  
very highly a little <sup>of the muriatic</sup> ~~Sp~~ <sup>L</sup> ~~water~~: And in mel:  
Rhubarb <sup>to be</sup> applied to the pores. 8 Bark.

It is one of the epidemics of  
Barbadoes where it has been ably decried  
by Dr Hendry by the name of the Glandular disease.  
<sup>Dr Chisholm who mentions it in</sup>  
<sup>his travels through the West Indies in search of Domingo pulses says</sup>  
<sup>it was first observed after the importation of y. River.</sup>  
~~It affects the glands of the throat - the groins,  
lips, nose -~~  
the axilla - breasts - knees - testicles & ovaries  
muscles - eyes & ears externally, also the  
mesenteric glands - <sup>with skin & soft parts,</sup> lungs, liver, bladder,  
rectum, uterus, & ovaria internally. It  
occasionally affects the teeth & all the bones  
of the body. - it is then called Ricketts.  
It is a very common disease in Eng.

of the Hydrophobic state of  
fever.

You will find an account of this  
state of fever in Alibert's excellent  
treatise upon fevers. It appeared in one  
or two cans of the yellow fever in 1793. I saw  
~~I but don't know~~  
a case of it in  
the Autumn of 1809 in Gro Wilson.

- The ~~had alld~~ had long been  
afflicted with the nervous predisposition.
- This disease appeared all the symptoms  
of Hydrophobia except the dread of water,  
which is frequently absent in it. His  
pulse was active. I bled & purged, &  
blistered him, & thus cured him in  
a few days. -

>

The amenorrhagic state of fever. This  
disease ~~or disease of blood~~. will be taken no-  
-tice of when we come to treat upon the  
diseases of Women.

H. G. Webster says it often accompanies the  
bilious fevers of Jamaica. Mr. and <sup>w</sup> Elliot  
informed me he had seen it ~~often~~<sup>in a</sup>  
whole Company of Surveyors in the who  
were affected with the submortal fever.

I have seen it several times in this city.

Even ~~the~~ Epilepsy <sup>it is</sup> sometimes a  
symptom of fever according to Abibus <sup>Dr.</sup> ~~the~~ <sup>say</sup> ~~the~~  
attended yellow fever in 1793 & a case of ~~yellow~~  
which ended in Hydrocephalus: interwoven with the  
case of the late Dr. Garrison, that is Grounds a  
higher & more permanent grade of Con-  
vulsions. - Woepfer describes an epidemic  
fever in Germany in 1893 in which  
convulsions were a general symptom. It  
was but for his bad grain.

## Convulsive state of fever

Tetanus from all their causes are sometimes thrown upon the muscles, and bring on general or partial convulsions. Children are most subject to them. But they occur in adults in malig fevers.

The Tetanus is sometimes a symptom of fever. <sup>V see Elliott, & Dr. Hunter's facts.</sup> These convulsions are now & then excited by the motion of the patient. as in Capt. Taylor, & by touch - especially as in the girl in the yellow fever.

### Remedies

U.S.: ~~opium~~ and all the remedies  
ch are indicated by the fever of which  
these convulsions are symptoms, with  
the addition of such as act more im-  
mediately upon the muscular system  
such as Oil of Amber - Asafetida &c

+ Dr Lydumham & Dr Willis describe a fever in  
1875 which was attended with hypocondriac  
symptoms.

the Hippocratic state of <sup>fever</sup> in a young man  
I had a remarkable case of it <sup>most</sup>  
<sup>in the</sup> last year 1805 under my care. This  
deathophobia was accompanied the typhus  
or chronic fever of the season under w:  
he laboured. He spoke of nothing but  
dying every time I visited him, and  
often fixed upon the precise hour on  
which he was to die. His countenance  
indicated the deepest distress & often  
honor. Bark-wine & volatiles <sup>& the hope w:</sup>  
which I took pains to inspire him,  
overcame ~~but~~ his <sup>but</sup> ~~desire~~ <sup>but</sup>  
of death ~~but~~ <sup>but</sup> his dread of death  
was ~~but~~ <sup>but</sup> confirmed after his fever had  
been ~~but~~ <sup>but</sup> over by last grain.

The Hysterical & Hypochondriacal  
States of fever.

Symptoms of both these States of the nervous system often combine in fever. In the Hypochondriac - the brain is affected, and the patient labours under a constant death phobia. In the hysterical State of fever, there is a disposition to fits - with pale urine - Globus and clavis hystericae<sup>t</sup>. They are troublesome cases, & require great attention & management. The same Remedies for these states of fever should be the same as for the fever with which these symptoms blend themselves. The Palliative need may be given for them to please our patients.

Hysterical Symptoms which blended with fever - 50 to 100: Osspirite 25.

in part left him. By this fituation of  
his system I changed my conduct to-  
wards him. Upon asking him ~~in my~~<sup>one</sup>  
first day how he was (having previously  
found his pulse ~~scarce~~<sup>much improved</sup> natural) he  
answered "very bad," & added that he  
was sure he should die. I said I was  
sorry for it, - and then <sup>a short</sup> time after ~~asked~~  
~~silence as his~~<sup>asked</sup> him ~~what~~<sup>excited</sup> whether  
I should send a jones to him to measure  
him for his Coffin! This question ~~excited~~  
new emotions in him - he dismissed his  
~~from that time~~<sup>he</sup> recovered, without =

✓ Cutaneous Diseases are common Travellers  
till us in Egypt. They <sup>are</sup> probably a translation  
of the plague to the skin.

=mentioning his dread of death to me  
in any of my subsequent visits to  
him.

~~Hysteric symptoms when bleed~~  
was but rarely seen again.

## The cutaneous state of fever

In this case, the fever is suffocated in the skin.

They are distinguished from the others, by the fever on the skin being in a suffocated state - whence they are <sup>attended</sup> rarely, heat, thirst, <sup>or</sup> quick pulse: I have supposed the lymph to be an exhausted fever. It arises from all the causes of an annual fever. It is less declined in Europe with those fevers. The prickly heat is a substitute for yellow fever in the West Indies according to Dr Hillary. None have it in whom this infection continues during a sickly season. The Tinea Capitis and many other local eruptions often alternate with fever. The state of the

Should not deduce no from  
with fever suppose great dependence to  
attending chiefly to the fever. It may be  
known by the nurse - less an Usurping  
Epidemic. I was once called to a lady  
in consultation <sup>to</sup> with a physician of  
in this city who for the first attack of  
the yellow fever had some trifling hysterical  
symptoms. She was taking <sup>nothing but</sup> laudanum.  
— I advised leaving it <sup>the use of</sup> off & of mercury,  
— she by the use of which (the former 13  
times) she was cured of a furious  
attack of yellow fever. Her first physician  
could not believe her disease was yellow  
fever, because she had not been on  
board of a ship, nor was any person  
ill with the yellow fever.

blood respects should never be overlooked  
in prescribing for them.

The Remedies should be  
1 Red: 2 purges - 3 meats - "low or full diet  
according to the state of the system.  
+ I mentioned a fact from Dr Thury of St  
the bleeding pills preventing the leprosy ~~that~~<sup>in</sup>  
Austria. This shows the connection between  
diseases of the skin & blood letting.

was best voor ons voor gemaan.
